

Equipment

cetotec develops coordinated solutions for a modernization and automation of existing plants needing state-of-the-art process-control engineering or exhaust air purification equipment. Our long experience permits a customized design and manufacture of components according to the individual requirements of each plant.

- High performance aerator
- Effective foam system
- Stainless steel pumps
- Sensors, Flow meter
- Nutrient dosing equipment
- Piping & Fittings

We offer tailor-made solutions for any installation, no matter whether stainless steel or wooden tank, laboratory or production scale.

Air Scrubber for the Recovery of VOC's from the Exhaust Air

Cetotec offers solutions for the purification of exhaust air from Fermenters and at the same time recovery of volatiles from the air. Our air scrubbers are individually designed to fit the local conditions and requirements. By combining the air scrubber with a condenser, the yield can be even higher.
